**Preparations**

**Downloading Installation Files for Service Program**  
 1. Use Computer with USB and Admin rights  
 2. Copy Folder: C:\Kaecher to C:\Kaecher\_save  
 3. Open Kärcher-Inside:  
 DOKUMENTE -> SERVICE -> DOWNLOADS, SCRUBBERS AND SWEEPERS -> SERVICEMODUL-> SERVICE PROGRAMM V5.1-> UPDATE x  
 "Service Program Version V5.2 - Installation\_CD\_USBStick"

Create external drive and start Installation from there.  
 1. Mark extracted files and folder and copy to the external drive  
 2. Start „Autostart.exe“ in the external drive.

1	6.803-003.0	Magnet tester	1.000	ST

---

Das Prüfgerät ist zum Prüfen und Messen an instandgesetzten oder geänderten elektrischen Geräten nach DIN VDE 0701 oder DIN VDE 0702 bestimmt. Gemäß diesen Vorschriften müssen nach einer Instandsetzung oder Änderung elektrischer Geräte der Schutzleiterwiderstand, der Isolationswiderstand, der Ersatz-Ableitstrom und bei Datenverarbeitungseinrichtungen und Büromaschinen die Spannungsfreiheit berührbarer leitfähiger Teile gemessen werden.

The tester is intended for the testing and measurement of repaired or modified electrical devices in accordance with DIN VDE 0701-702. These regulations require the measurement of protective conductor resistance, insulation resistance and equivalent leakage current for repaired or modified electrical devices, as well as testing for the absence of voltage at exposed, conductive parts for data processing systems and office machines.

(2) Signallampe PE zur Prüfung des Schutzleiters  
Die Signallampe PE leuchtet, wenn zwischen der berührten Kontaktfläche (4) und dem Schutzkontakt des Netzanschlusstekers (1) eine Potentialdifferenz von  $\geq 100$  V besteht.  
(3) Krokodilklemme (Greifklemme zum Aufstecken auf die Prüfspitze)  
Mit der Krokodilklemme schließen Sie, zur Messung des Schutzleiterwiderstandes, das Gehäuse des Prüflings an. Achten Sie dabei auf guten Kontakt.  
(4) Kontaktfläche für Fingerkontakt  
Beim Berühren der Kontaktfläche leuchtet die Signallampe (2), wenn zwischen dem Schutzleiter PE des Netzanschlusstekers (1) und der berührten Kontaktfläche eine Potentialdifferenz von  $\geq 100$  V besteht. Die Kontaktfläche ist von allen Anschlüssen und von der Messschaltung galvanisch getrennt und entspricht somit der Schutzklasse III  
Prüfen des Schutzleiterpotentials  
Berühren Sie mit dem Finger die Kontaktfläche (4) und gleichzeitig ein geerdetes Teil (z.B. Wasserleitung). Die Signallampe PE (2) darf dabei nicht leuchten! Das Potential zwischen dem Schutzleiter des Netzanschlusstekers (1) und der Kontaktfläche (4) ist dann  $\leq 100$  V.

(2) PE Signal Lamp for Protective Conductor Testing  
The PE signal lamp lights up, if a potential difference of  $\geq 100$  V occurs between the contacting surface (4) and the earthing contact at the mains plug (1).  
(3) Alligator clip (gripper clip for attachment to the test probe)  
Connect the housing of the device under test with the alligator clip for measurement of protective conductor resistance.  
(4) Contacting Surface for Contact Finger  
The PE signal lamp (2) lights up, if a potential difference of  $\geq 100$  V occurs between the PE protective conductor at the mains plug (1) and the contacting surface. The contacting surface is electrically isolated from all terminals, as well as from the measuring circuit, and thus conforms to protection class III!  
Testing Protective Conductor Potential  
Bring the contact finger into contact with the contacting surface (4) and, at the same time, with a grounded object (e.g. a water pipe). The PE signal lamp (2) must not light up! Potential between the mains plug protective conductor (1) and the contacting surface (4) is then  $\leq 100$  V.

Anschließen des Prüflings (A) an das Prüfgerät  
Für die Messung von Schutzleiterwiderstand, Isolationswiderstand und Ersatz-Ableitstrom

Connecting the Device Under Test to the Test Instrument  
for the measurement of protective conductor resistance, insulation resistance and equivalent leakage current
